

## SORA Interest Rate Benchmark – Summary Report on Errors

### Background

As set out in the [SORA Key Features and Calculation Methodology](#) document, MAS has put in place policies and data validation checks to ensure the accuracy of SORA. Reporting banks are expected to attest annually to having robust governance frameworks and necessary policies and procedures to ensure that data provided to MAS is accurate and timely.

In the event of an error, banks shall rectify the error and re-send the data file to MAS as soon as practicable. SORA will be republished on a given day if:

- a) an error is highlighted by 11.30am on the day that SORA is published, and
- b) the error results in SORA being two or more basis points away from the rate published at 9.00am.

Republishing of SORA will be no later than 12.00pm on business day after the SORA reference date (“republishing deadline”), and MAS will only republish SORA once for any given day. Any republishing of SORA will be indicated clearly under the SORA Calculation Method field on the [Domestic Interest Rates](#) webpage where SORA is published. Once the republishing deadline has passed, no amendment will be made, given the need for finality in SORA rates for settlement of financial contracts. Such errors will be disclosed in the quarterly Summary Report on Errors subsequently.

Accordingly, the SORA Index and Compounded SORA (“SORA Averages”) will be republished in the event of a republishing of SORA, or error(s) in the calculation of any SORA Average. Any republishing will be done by 12.00pm on the SORA Publication Date, after which no further amendments will be made.

Update for Latest Period Covered: 1 April 2021 to 30 June 2021

There was no error over this period.

## Annex: Historical Summary Reports on Errors

5 August 2020 to 31 March 2021

This table below provides summary information on errors which did not meet the republication criteria for the stated period.

SORA value date	Rate	Absolute impact on rate in basis points					Reason	Comments
		Impact < 0.5	0.5 ≤ Impact < 1.0	1.0 ≤ Impact < 1.5	1.5 ≤ Impact < 2.0	Impact ≥ 2.0		
25 Aug 2020	SORA	✓					Reporting bank data error	-
12 Nov 2020	1M, 3M, 6M Compound SORA and SORA Index	✓					Administrator computation error	Rates were republished on 16 Nov 2020 <sup>1</sup>
13 Nov 2020		✓						

<sup>1</sup> On 16 November 2020, MAS republished the SORA Averages on 12 and 13 November 2020 (as shown in Table 1 in this report) to correct a computational error, which was discovered on 16 November 2020. In particular, the SORA Averages did not reflect the SORA that were published on 12 and 13 November 2020. Given that the publication of SORA Averages had just started, an exception from the republication policy was made, and the SORA Averages were republished to avoid market confusion. Since then, measures have been implemented to minimise the risks of such errors. Going forward, there will be no republication of SORA Averages after the republication deadline, and any errors will be disclosed in the quarterly report.
