

Consumer Price Developments in January 2021

Summary

- MAS Core Inflation edged up to **-0.2%** on a year-on-year (y-o-y) basis in January, from **-0.3%** in December.
 - This was due to a smaller decline in services costs.
- CPI-All Items inflation rose to **0.2%** in January, from **0%** in December.
 - This was driven by the pickup in core inflation, as well as higher private transport and accommodation inflation.

Chart 2: % Point Contribution to Year-on-year CPI-All Items Inflation

* Private transport and accommodation are excluded from the MAS Core Inflation measure.

Source: MAS, MTI estimates

CPI-All Items inflation rose to 0.2% y-o-y in January.

CPI-All Items

CPI-All Items inflation rose on the back of a smaller decline in services costs, as well as larger increases in private transport and accommodation costs.

Services

Services costs fell at a slower pace largely on account of higher tuition & other fees and point-to-point transport services costs.¹

¹ Holiday expenses also saw a milder pace of decline. However, most of the components in the holiday expenses CPI were imputed using the overall change in CPI-All Items as they remain unavailable for consumption due to international travel restrictions. Hence, the CPI for holiday expenses does not fully reflect the actual price changes for these components. For more details, please refer to the Technical Note in the Department of Statistics' release titled "Singapore Consumer Price Index for January 2021".

Private Transport

Private transport inflation rose due to a larger increase in car prices and a more modest fall in petrol prices.

Accommodation

Accommodation inflation picked up as housing rents increased at a faster rate with the expiry of rental rebates given to households living in public rental flats.²

Retail & Other Goods

The cost of retail & other goods fell at a slightly steeper pace, mainly due to larger declines in the prices of personal care products and clothing & footwear.

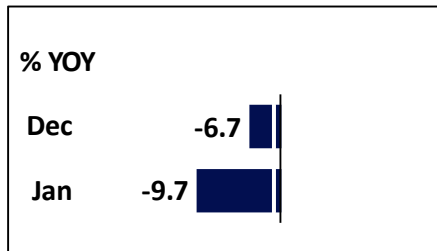

Food

Food inflation dipped as the prices of non-cooked food and restaurant meals rose at a more moderate pace.

² Households living in public rental flats received 50% rental rebates from October 2020 to December 2020 as part of government measures to help households cope with the economic impact of the pandemic.

Electricity & Gas

The cost of electricity & gas saw a larger decline on account of a steeper drop in electricity prices as the electricity tariff was revised downwards.³

³ The electricity tariff for households (inclusive of GST) was reduced to 22.21 cents per kilowatt hour (kWh) for Q1 2021, from 22.93 cents per kWh in Q4 2020. On a y-o-y basis, the electricity tariff fell by 14.4% in January 2021, a steeper pace of decline than the 8.5% drop in the previous month.

Outlook

In the quarters ahead, external inflation is likely to pick up amid the recovery in global oil prices. Notably, Brent crude oil prices have risen further since Q4 2020, supported by output cuts among OPEC+ members. At the same time, continuing negative output gaps in Singapore's major trading partners should cap the extent of the increase in underlying global inflation. On the domestic front, cost pressures are expected to stay low, as wage growth and commercial rents are likely to remain subdued.

Core inflation is forecast to turn mildly positive this year, as the projected rise in oil prices from a year ago leads to a pickup in electricity and gas tariffs, and the disinflationary effects of government subsidies introduced in 2020 fade. Some components of domestic services inflation could also gradually increase, in tandem with the economic recovery.

Meanwhile, accommodation costs have stabilised, with housing rents in some areas registering increases. In addition, private transport costs have risen on the back of firm demand for cars and higher petrol costs.

Both MAS Core Inflation and CPI-All Items inflation averaged -0.2% in 2020. For 2021, MAS Core Inflation is expected to average 0–1%, while CPI-All Items inflation is projected to be between -0.5 and 0.5%.

Annex: Price Indicators

CPI – All Items

The CPI is commonly used as a measure of consumer price changes in the economy. It tracks the change in prices of a fixed basket of consumption goods and services commonly purchased by the general resident households over time.

The CPI covers only consumption expenditure incurred by resident households. It excludes non-consumption expenditures such as purchases of houses, shares and other financial assets and income taxes etc.

The CPI – All Items provides a comprehensive overview of the prices of consumer goods and services. Nevertheless, useful information can also be revealed by complementary CPI series derived by excluding specific items in the All Items basket. For example, two other CPI series reported on a monthly basis are the CPI less imputed rentals on owner-occupied accommodation and the MAS Core Inflation.

MAS Core Inflation

The Monetary Authority of Singapore (MAS) monitors a core inflation measure that excludes the components of “Accommodation” and “Private Transport”. These items are excluded as they tend to be significantly influenced by supply-side administrative policies and are volatile. Core inflation is meant to capture the generalised and persistent price changes that are driven by underlying demand conditions. It thus provides useful information for monetary policy which has the objective of ensuring price stability in the medium term.

CPI less imputed rentals on owner-occupied accommodation

Accommodation, one of the groups in the Housing & Utilities category of the CPI, comprises “rented and owner-occupied accommodation”, as well as “housing maintenance & repairs”. A significant share of the Accommodation group is “owner-occupied accommodation (OOA)” cost, which is meant to reflect the costs to homeowners of utilising the flow of services provided by their homes over an extended period of time. As the cost of using housing services is not directly observed for homeowners, it is proxied by market rentals.

Changes in the CPI imputed rentals on OOA, however, have no direct impact on the monthly cash expenditure of most households in Singapore as they already own their homes. Hence, the CPI less imputed rentals on OOA is compiled as an additional indicator to track households’ actual expenditures. Actual rentals paid on rented homes are still included in this measure.

CPI Statistics

Detailed CPI statistics can be found in the Department of Statistics' release titled "Singapore Consumer Price Index for January 2021". This release also contains further information on the various price indicators published.
