

Annex A – About Global FinTech Hackcelerator 2025

The Global FinTech Hackcelerator, organised by MAS and in partnership with the Global Finance & Technology Network (GFTN), focuses on innovative solutions to address problem statements centred on “Artificial Intelligence (AI) for Financial Services”.

Problem Statements

1. **AI Agents for Wealth Management by BNP Paribas** – How might we leverage AI to help relationship managers in wealth management reduce time spent on administrative tasks, while augmenting their ability to identify new revenue opportunities and deliver superior client outcomes?
2. **Agentic AI for SME Financial Empowerment and Inclusion by Mastercard** – How might we deploy AI-enabled financial assistants that empower SMEs to manage cashflow, optimise operations, and access credit, in order to enable underserved businesses to participate fully in the digital economy?
3. **AI-Driven Expertise and Client Experience Augmentation for Insurance by Prudential AI Lab** – How might we bridge the expertise gap in core insurance processes, such as claims handling and underwriting, in order to equip human decision-makers with AI-powered insights and recommendations for faster, more informed decisions?

A total of 180 registrations, comprising teams from more than 40 jurisdictions around the globe, were received for this year’s competition and 17 finalists were shortlisted. All finalists pitched their solutions on the Demo Day at SFF on 12 November 2025 and were evaluated by a panel of judges comprising industry experts across multiple domains. The winners were announced at the SFF FinTech Excellence Awards 2025 dinner on 13 November 2025.

Rewards for Finalists and Winners

All 17 finalists received a S\$20,000 cash stipend and the top three winners received an additional S\$80,000 each in prize money.
