

GUIDELINES TO THE SECURITIES AND FUTURES (REPORTING OF DERIVATIVES CONTRACTS) REGULATIONS 2013

Guideline No. : [to be published]

Issue Date : [to be published]

1 PURPOSE

1.1 The Committee on Payments and Market Infrastructures and the International Organisation of Securities Commission (“**CPMI-IOSCO**”) has published three sets of technical guidance on the reporting of data fields in respect of over-the-counter (“**OTC**”) derivatives contracts – namely, (i) the unique transaction identifier (“**UTI**”),¹ (ii) the unique product identifier (“**UPI**”),² and (iii) other critical OTC derivatives data elements (“**CDE**”) ³ – to facilitate the global harmonisation of reportable data elements. The Monetary Authority of Singapore (“**MAS**”) has adopted the technical guidance issued by CPMI-IOSCO and made corresponding amendments to the Securities and Futures (Reporting of Derivatives Contracts) Regulations 2013 (“**SF(RDC)R**”). To support this adoption, this Guidelines provide further guidance on how to report data fields required under the SF(RDC)R. This Guidelines should be read in conjunction with the relevant provisions in the Securities and Futures Act 2001 (“**SFA**”) and SF(RDC)R, and supplemented by the [FAQs on the SF\(RDC\)R](#).

1.2 These Guidelines are issued by MAS pursuant to section 321 of the SFA and take effect on [●] October 2024.

2 Definitions

2.1 For the purpose of this Guidelines, the following definitions apply:

“central counterparty” or “CCP” means an approved clearing house or a recognised clearing house, or a person operating a clearing facility outside Singapore that is regulated by a financial services regulatory authority of a foreign jurisdiction;

“confirmation platform” means a platform or facility that provides an electronic mechanism for the counterparties to an OTC derivatives contract to confirm some or all of the terms in that OTC derivatives contract;

“OTC derivatives contract” means a derivatives contract that is not an exchange-traded derivatives contract;

“reporting deadline” means –

¹ [CPMI-IOSCO Technical Guidance on Harmonisation of unique transaction identifier](#)

² [CPMI-IOSCO Technical Guidance on Harmonisation of unique product identifier](#)

³ [CPMI-IOSCO Technical Guidance on Harmonisation of critical OTC derivatives data elements \(other than UTI and UPI\)](#)

- (a) in relation to the reporting of information on a specified derivatives contracts under section 125 of the SFA, the time as set out in Regulation 9 of the SF(RCD)R at which a person must report such information; and
- (b) in relation to the reporting of information on an OTC derivatives contract under the laws and practices of a foreign jurisdiction, the time at which a person must report such information under the laws and practices of that foreign jurisdiction;

"specified derivatives contract" and "specified person" have the meanings given by section 124 of the SFA;

"trade repository" means a licensed trade repository or licensed foreign trade repository, or a trade repository as defined in section 46B of the SFA, that is regulated by a financial services regulatory authority of a foreign jurisdiction;

"trading venue" means an approved exchange, a recognised market operator, or an overseas exchange;

"unique transaction identifier" or "UTI" means a unique identifier to denote a specified derivatives contract or a reportable OTC derivatives contract in a foreign jurisdiction;

"UTI generating entity" means the entity that generates the UTI.

2.2 Unless otherwise defined, the terms contained in these Guidelines have the same meaning as defined in the SFA and SF(RDC)R.

3 UNIQUE TRANSACTION IDENTIFIER

Approach for the reporting of UTI

3.1 As required in the SF(RDC)R, a specified person is to report a UTI for each reportable specified derivatives contract. The UTI reported should be unique to that specified derivatives contract, and where the specified derivatives contract is reported more than once due to requirements in the SF(RDC)R⁴ or reporting requirements of a foreign jurisdiction, the same UTI should be reported under the SF(RDC)R.

3.2 The specified person should continue to reference the same UTI for that specific derivatives contract when reporting any amendment, modification, variation or change to any information reported under the First Schedule of the SF(RDC)R.⁵ However, where a life cycle event of a specified derivatives contract creates one or more new reportable specified derivatives contracts, a new UTI should be generated for each new reportable specified derivatives contract.

⁴ For example, a specified derivatives contract may be reported more than once where both counterparties to the contract are specified persons.

⁵ To illustrate, specified persons should continue to reference the same UTI in the following examples:

- (a) change in any previously reported information, such as a revaluation, change in notional value or whether the contract has been confirmed;
- (b) reporting of end-of-life events such as early termination; and
- (c) correction of previously reported information, which was incorrect, unless the incorrect information is the UTI itself.

Internal policies and procedures

3.3 MAS expects each specified person to assess and establish appropriate policies and procedures to ensure that it can fulfil its obligation in generating the UTI or obtain UTIs, as may be the case, in a timely manner.

Generation of UTI

3.4 To avoid the generation and reporting of multiple UTIs for the same specified derivatives contract, only one entity should be the UTI generating entity. Specified persons should determine the UTI generating entity in accordance with **Table 1**.

3.5 If the specified person is unable to obtain the UTI from the UTI generating entity determined in Table 1 (e.g. the UTI generating entity is unable or unwilling to generate the UTI)⁶ ("**First UTI generating entity**"), the specified person should determine a second UTI generating entity according to the next applicable step in Table 1.⁷

3.6 While specified persons should use the method in Table 1 to determine the UTI generating entity as a default, in the event where a specified person faces difficulties in determining the UTI generating entity in accordance with Table 1,⁸ a specified person and its counterparty to a specified derivatives contract may choose to instead agree between themselves on who is to be the UTI generating entity. Counterparties may agree for a third party other than themselves to be the UTI generating entity only if that third party agrees to generate and provide the UTI by the reporting deadline.

Table 1: Generation of UTI

Steps	Type of specified derivatives contract	UTI generating entity
1.	Where the counterparties of a specified derivatives contract are: (a) a CCP; and (b) another entity that is not a CCP,	The CCP.

⁶ This may occur if the First UTI generating entity is regulated in a jurisdiction that does not, or has not yet, adopted the UTI Technical Guidance.

⁷ As an example, in a cleared specified derivatives contract between a specified person and a CCP that is regulated in a foreign jurisdiction, Table 1 at Step 1 would determine that the UTI generating entity is the CCP. However, the CCP may be regulated in a foreign jurisdiction that has not adopted the CPMI-IOSCO technical guidance, and thus may be unable or unwilling to generate the UTI. If so, the specified person should then determine a second UTI generating entity in accordance to the next applicable step(s) in Table 1.

⁸ In scenarios where the specified derivatives contract is centrally-cleared or centrally-executed, MAS generally expects that the specified person would not face difficulties in determining the UTI generating entity in accordance to steps 1 to 3 of Table 1.

Steps	Type of specified derivatives contract	UTI generating entity
2.	Where the counterparties of a specified derivative contract are: <ul style="list-style-type: none"> (a) a clearing member (who is acting in its capacity as a clearing member); and (b) another entity that is not a CCP, 	The clearing member.
3.	Both of the following apply: <ul style="list-style-type: none"> (a) where steps 1 and 2 are not applicable; and (b) where the specified derivatives contract was centrally-executed on a trading venue, 	The trading venue.
Contracts that are only reportable under the SFA		
4.	Where all of the following apply: <ul style="list-style-type: none"> (a) Steps 1 to 3 are not applicable; (b) none of the counterparties to the specified derivatives contract are subject to the OTC derivatives reporting requirements of a foreign jurisdiction; and (c) only <u>one</u> counterparty to the specified derivatives contract is required to report the contract under the SFA (i.e. only one counterparty is a specified person), 	The specified person.
5.	Where all of the following apply: <ul style="list-style-type: none"> (a) Steps 1 to 3 are not applicable; (b) none of the counterparties are subject to the OTC derivatives reporting requirements of a foreign jurisdiction; and (c) <u>both</u> counterparties to the specified derivatives contract are required to report the contract under the SFA (i.e. both counterparties are specified persons), the UTI generating entity depends on the following circumstances:	

Steps	Type of specified derivatives contract	UTI generating entity
	(i) for specified derivatives contracts which are electronically confirmed,	The confirmation platform.
	(ii) otherwise, where both counterparties have an agreement on who should generate the UTI,	The entity as determined by the agreement between both counterparties.
	(iii) otherwise, if the contract will be reported to a single trade repository,	The trade repository.
	(iv) otherwise, in other circumstances,	The counterparty whose LEI is first based on the sorting (in an alphanumeric order) of the LEIs of the counterparties with the characters of the LEI reversed.
Contracts that are reportable in Singapore and one or more foreign jurisdictions		
6.	<p>Where all of the following apply:</p> <p>(a) Steps 1 to 3 are not applicable;</p> <p>(b) the counterparties to the specified derivatives contract are subject to reporting obligations under the SFA and one or more foreign jurisdiction(s); and</p> <p>(c) a <u>foreign jurisdiction</u> has a sooner reporting deadline.</p>	The entity as determined according to the reporting requirements of that foreign jurisdiction.
7.	<p>Where all of the following apply:</p> <p>(a) Steps 1 to 3 are not applicable;</p> <p>(b) the counterparties to the specified derivatives contract are subject to reporting obligations under the SFA and one or more foreign jurisdiction(s); and</p> <p>(c) the SFA has a sooner reporting deadline,</p> <p>the UTI generating entity depends on the following circumstances:</p>	

Steps	Type of specified derivatives contract	UTI generating entity
	(i) for specified derivatives contracts which are electronically confirmed,	The confirmation platform.
	(ii) otherwise, where both counterparties have an agreement on who should generate the UTI,	The entity as determined by the agreement between both counterparties.
	(iii) otherwise, if the specified contract will be reported to a single trade repository,	The trade repository.
	(iv) Otherwise, in other circumstances,	The counterparty whose LEI is first based on the sorting (in an alphanumeric order) of the LEIs of the counterparties with the characters of the LEI reversed.
8.	<p>Where all of the following apply:</p> <p>(a) steps 1 to 3 are not applicable;</p> <p>(b) the counterparties to the specified derivatives contract are subject to reporting obligations under the SFA and one or more foreign jurisdiction(s); and</p> <p>(c) <u>no jurisdiction</u> has a sooner reporting deadline,</p> <p>the UTI generating entity depends on the following circumstances:</p>	
	(i) where both counterparties have an agreement on who should generate the UTI,	the entity as determined by the agreement between both counterparties.
	(ii) otherwise, for specified derivatives contracts which are electronically confirmed,	the confirmation platform.
	(iii) otherwise, if the specified derivatives contract will be reported to a single trade repository,	the trade repository.
	(iv) otherwise, in other circumstances,	The counterparty whose LEI is first based on the sorting

Steps	Type of specified derivatives contract	UTI generating entity
		(in an alphanumeric order) of the LEIs of the counterparties with the characters of the LEI reversed.

Responsibility to provide or obtain UTI in a timely manner

3.7 MAS generally expects that UTIs will be generated in a timely manner for compliance with the reporting deadline in the SF(RDC)R. Where a specified person is the UTI generating entity, it should make reasonable efforts to provide the UTI in a timely manner to any entity who requests for the UTI to comply with the SF(RDC)R. Conversely, if a specified person is not the UTI generating entity, it should make reasonable efforts to obtain the UTI, whether from the UTI generating entity or a counterparty to the specified derivatives contract, in a timely manner to comply with the SF(RDC)R.

Implication on agency reporting requirements under SFA

3.8 Under the SFA, a specified person, who executes or causes a specified derivatives contract to be executed as an agent of a party to the contract, is required to report the contract if it is booked in or traded in Singapore. Given that an agent to the transaction is typically not a counterparty to the contract, MAS does not expect a specified person who is acting as an agent to be a UTI generating entity. Instead, such a specified person would obtain the UTI from the UTI generating entity or counterparties to that specified derivatives contract.

3.9 In the situation where:

- (a) no counterparty to a specified derivatives contract has a reporting obligation in under the SFA or in another foreign jurisdiction; and
- (b) a specified person executes or causes the specified derivatives contract to be executed as an agent of a party to the contract that is booked in or traded in Singapore,

the UTI generating entity should be determined according to Steps 1 to 3 of Table 1 without modification, or Steps 4 to 8 of Table 1 by replacing “counterparties” with “agents of counterparties to the contract”.

Use of interim-UTI

3.10 Where a specified person is not the UTI generating entity, and where the specified person is unable to obtain the UTI by the reporting deadline despite having made reasonable efforts, the specified person may internally generate an interim-UTI to be reported as the UTI. The reporting entity is expected to continue to make reasonable efforts to obtain the UTI from the UTI generating entity.

3.11 When the specified person subsequently obtains the UTI from the UTI generating entity, the specified is required to submit a revised report of the specified derivatives contract with that UTI no later than 2 business days after obtaining the UTI. When doing so, specified persons should also report the interim-UTI in the “prior UTI” data field.

3.12 Specified persons should not frequently report interim-UTIs.⁹ As provided in paragraph 3.3, specified persons are expected to establish written policies and procedures in relation to UTI. Such policies and procedures should ensure that the specified person is able to determine the UTI generating entity in accordance with paragraphs 3.4 to 3.6 on an ongoing basis.

4 EXPLANATORY NOTES TO THE FIRST SCHEDULE TO THE SF(RDC)R

4.1 The First Schedule to the SF(RDC)R sets out the data fields to be reported for specified derivatives contracts. The First to Fifth Columns of **Table 2** replicate that in the First Schedule to the SF(RDC)R, and the Sixth Column provides explanatory notes on the respective data fields. The explanatory notes describe how the respective data fields should be reported in different scenarios. In some cases, the explanatory notes may provide examples of specified derivatives contracts for which a data field is required or not required to be reported. The examples are intended to provide guidance to specified persons through illustrations and are by no means exhaustive.

4.2 MAS expects specified persons to report the data fields required in the First Schedule of the SF(RDC)R in an XML template in accordance with the ISO 20022 methodology.

⁹ An example of a situation where an interim-UTI may be used is where the UTI generating entity experiences outages or other unforeseen circumstances.

Table 2: First Schedule to the SF(RDC)R and explanatory notes

									or licensed foreign trade repository, or client code. In the case of individuals, to use a client code.
3	Counterparty information	Counterparty 2 identifier type	Indicator of whether LEI (including pre-LEI) was used to identify "Counterparty 2". Field value: True False	✓	✓	✓	✓	✓	To report "True" if LEI or Pre-LEI was used to report "Counterparty 2". Otherwise, report "False".
4	Counterparty information	Trading capacity of specified person	To denote trading capacity of specified person. Field value: Principal Agent	✓	✓	✓	✓	✓	-
5	Counterparty information	Direction (where applicable)	Indicator of whether "Counterparty 1" is the buyer or the seller in the contract, where applicable. Field value: "BYER" = Buyer "SLLR" = Seller	✓	✓	✓	✓	✓	This data field is not applicable to contracts where "Direction of leg 1" and "Direction of leg 2" apply. A non-exhaustive list of examples of contracts for which this data field could apply are: (a) most forwards and forward-like contracts (except for foreign exchange forwards and foreign exchange non-deliverable forwards) (b) most options and option-like contracts including swaptions, caps and floors

<i>First column</i>	<i>Second column</i>	<i>Third column</i>	<i>Fourth column</i>	<i>Fifth column</i>					<i>Sixth column</i>	
<i>Index</i>	<i>Type of information</i>	<i>Data field</i>	<i>Description of data field</i>	<i>Class of specified derivatives contracts</i>					<i>Explanatory notes</i>

										(c) credit default swaps (buyer/seller of protection) (d) variance, volatility and correlation swaps (e) contracts for difference (CFDs) and spreadbets.
6	Counterparty information	Direction of leg 1 (where applicable)	Indicator of whether "Counterparty 1" is the payer or the receiver of leg 1 in the contract, where applicable. Field value: "MAKE" = Payer "TAKE" = Receiver	✓	✓	✓	✓	✓		This data field is not applicable to contracts covered by "Direction". A non-exhaustive list of examples of contracts for which this data field could apply are: (a) most swaps and swap-like contracts including interest rate swaps, credit total return swaps, and equity swaps (except for credit default swaps, variance, volatility, and correlation swaps) (b) foreign exchange swaps, forwards, non-deliverable forwards.
7	Counterparty information	Direction of leg 2 (where applicable)	Indicator of whether "Counterparty 1" is the payer or the receiver of leg 2 in the contract, where applicable. Field value: "MAKE" = Payer "TAKE" = Receiver	✓	✓	✓	✓	✓		This data field is not applicable to contracts covered by "Direction". A non-exhaustive list of examples of instruments for which this data field could apply are: (a) most swaps and swap-like contracts including interest rate swaps, credit total return swaps, and equity swaps (except for credit default swaps, variance, volatility, and correlation swaps) (b) foreign exchange swaps, forwards, non-deliverable forwards.

<i>First column</i>	<i>Second column</i>	<i>Third column</i>	<i>Fourth column</i>	<i>Fifth column</i>					<i>Sixth column</i>
<i>Index</i>	<i>Type of information</i>	<i>Data field</i>	<i>Description of data field</i>	<i>Class of specified derivatives contracts</i>					<i>Explanatory notes</i>
				<i>CR</i>	<i>IR</i>	<i>FX</i>	<i>EQ</i>	<i>CO</i>	
8	Counterparty information	Reporting specified person	Identifier of the specified person with the reporting obligation in respect of the contract. Field value: Alphanumeric string	✓	✓	✓	✓	✓	To use LEI or pre-LEI if LEI is not available.
9	Counterparty information	Data submitter	Identifier of the entity submitting information on the contract, which is reported to a licensed trade repository or licensed foreign trade repository. Field value: Alphanumeric string	✓	✓	✓	✓	✓	To use LEI or pre-LEI if LEI is not available. If the “Reporting specified person” has delegated the reporting to another person (e.g. a service provider), this data field will reflect the identity of the delegated person. Otherwise, it will reflect the identity of the “Reporting specified person”.
10	Contract information	Unique transaction identifier (UTI)	A unique identifier to denote the contract. Field value: Alphanumeric string	✓	✓	✓	✓	✓	Only one UTI should be generated for a contract. UTI should be constructed solely from the upper-case alphabetic characters A–Z or the digits 0–9, inclusive in both cases. UTIs are structured as a concatenated combination of the LEI of the UTI generating entity at the point of generation and a unique value created by that entity (where this value only needs to be unique within the set of such values generated by that entity since the combination with the LEI will guarantee uniqueness). The UTI generating entity may or may not be the reporting specified person.

<i>First column</i>	<i>Second column</i>	<i>Third column</i>	<i>Fourth column</i>	<i>Fifth column</i>					<i>Sixth column</i>
<i>Index</i>	<i>Type of information</i>	<i>Data field</i>	<i>Description of data field</i>	<i>Class of specified derivatives contracts</i>					<i>Explanatory notes</i>
				<i>CR</i>	<i>IR</i>	<i>FX</i>	<i>EQ</i>	<i>CO</i>	
11	Contract information	Unique product identifier (UPI)	An identifier to denote the product type. Field value: Alphanumeric string	✓	✓	✓	✓	✓	MAS intends to allow only the use of UPI generated by The Derivatives Service Bureau Limited, when it is available. Until such time, UPI may be reported using ISDA product taxonomy and product codes made available by the licensed trade repository or licensed foreign trade repository.
12	Contract information	Prior UTI (where applicable)	To denote the previous UTI that immediately precedes the UTI that relates to this contract, where applicable. Field value: Alphanumeric string	✓	✓	✓	✓	✓	Where an interim UTI was previously reported for this contract due to the temporary unavailability of UTI, to report the interim UTI previously reported. Where there is a predecessor contract that has given rise to this contract due to a lifecycle event, to report the UTI assigned to the predecessor contract that has given rise to this contract due to a lifecycle event, in a one-to-one relation between the contracts (e.g. in the case of a novation, when a contract is terminated, and a new contract is generated) or in a one-to-many relation between contracts (e.g. in clearing or if a contract is split into several different contracts). This data field is not applicable when reporting many-to-one and many-to-many relations between contracts (e.g. in the case of a compression).

16	Contract information	Fixed rate of leg 1 (where applicable)	Per annum rate of the fixed rate of leg 1, where applicable. Field value: Positive and negative values expressed as decimal	✓	✓	✗	✓	✓	Where "Direction of leg 1" is reported for the contract, information on leg 1 of the contract should be reported either as "Fixed rate of leg 1" or "Identifier of the floating rate of leg 1", as the case may be. Field value: Positive and negative values expressed as decimal (e.g. 0.0257 instead of 2.57%), up to 11 numeric characters including 10 decimal places
17	Contract information	Identifier of the floating rate of leg 1	Identifier of the rate used for leg 1 which are reset at predetermined intervals by reference to a market reference rate, where applicable.	✓	✓	✗	✓	✓	Where "Direction of leg 1" is reported for the contract, information on leg 1 of the contract should be reported either as "Fixed rate of leg

First column	Second column	Third column	Fourth column	Fifth column					Sixth column
Index	Type of information	Data field	Description of data field	Class of specified derivatives contracts					Explanatory notes
				CR	IR	FX	EQ	CO	
		(where applicable)	Field value: ISIN (12 alphanumeric digits)						1" or "Identifier of the floating rate of leg 1", as the case may be. In the case of a floating rate, if the floating rate has an ISIN, to report the ISIN in this data field. Otherwise, to report the floating rate in "Name of the floating rate of leg 1".
18	Contract information	Name of the floating rate of leg 1 (where applicable)	Name of the rate used for leg 1 which are reset at predetermined intervals by reference to a market reference rate, where "Identifier of the floating rate of leg 1" is not available. Field value: Alphanumeric string	✓	✓	✗	✓	✓	This data field is only applicable if leg 1 is a floating rate, and the floating rate does not have an ISIN. "Name of the floating rate of leg 1" should be reported in the format of currency, period (e.g. "ON" = Overnight, "W" = Week, "M" = Month), name. For example: USD 3M LIBOR, USD 12M LIBOR, SGD 6M SOR.
19	Contract information	Spread of leg 1 (where applicable)	For leg 1 of the contract, where applicable, the spread on the floating rate index reference price of leg 1, or the difference between the reference prices of two floating rate indexes. Field value: Any value if "Spread notation of leg 1" = 1 Any value expressed as decimal, if "Spread notation of leg 1" = 3 Any integer value expressed in basis points, if "Spread notation of leg 1" = 4	✓	✓	✗	✓	✓	For contracts with periodic payments (e.g. interest rate fixed/float swaps, interest rate basis swaps, commodity swaps), (a) spread on the individual floating rate index reference price, in the case where there is a spread on a floating leg(s). For example, USD-LIBOR-BBA plus .03 or WTI minus USD 14.65; or (b) difference between the reference prices of the two floating rate indexes. For example, the 9.00 USD "Spread" for a WCS vs. WTI basis swap where WCS is priced at 43 USD

									and WTI is priced at 52 USD. Field value: Any numeric value if "Spread notation of leg 1" = 1 Any value expressed as decimal (e.g. 0.0257 instead of 2.57%), if "Spread notation of leg 1" = 3 Any integer value expressed in basis points (e.g. 257 instead of 2.57%), if "Spread notation of leg 1" = 4
20	Contract information	Spread notation of leg 1 (where applicable)	Manner in which "Spread of leg 1" is expressed, where applicable. Field value: 1 = Monetary amount 3 = Decimal 4 = Basis points	✓	✓	✗	✓	✓	This data field is only applicable where "Spread of leg 1" applies.
21	Contract information	Spread currency of leg 1 (where applicable)	Currency in which "Spread of leg 1" is denominated, where applicable. Field value: Currencies included in ISO 4217	✓	✓	✗	✓	✓	This data field is only applicable if "Spread notation of leg 1" = 1.
22	Contract information	Fixed rate of leg 2 (where applicable)	Per annum rate of the fixed rate of leg 2, where applicable. Field value:	✓	✓	✗	✓	✓	Where "Direction of leg 2" is reported for the contract, information on leg 2 of the contract should be reported either as "Fixed rate of leg

<i>First column</i>	<i>Second column</i>	<i>Third column</i>	<i>Fourth column</i>	<i>Fifth column</i>					<i>Sixth column</i>

			Positive and negative values expressed as decimal						2" or "Identifier of the floating rate of leg 2", as the case may be. Field value: Positive and negative values expressed as decimal (e.g. 0.0257 instead of 2.57%), up to 11 numeric characters including 10 decimal places.
23	Contract information	Identifier of the floating rate of leg 2 (where applicable)	Identifier of the rate used for leg 2 which are reset at predetermined intervals by reference to a market reference rate, where applicable. Field value: ISIN (12 alphanumeric digits)	✓	✓	✗	✓	✓	Where "Direction of leg 2" is reported for the contract, information on leg 2 of the contract should be reported either as "Fixed rate of leg 2" or "Identifier of the floating rate of leg 2", as the case may be. In the case of a floating rate, if the floating rate has an ISIN, to report the ISIN in this data field. Otherwise, to report the floating rate in "Name of the floating rate of leg 2".
24	Contract information	Name of the floating rate of leg 2 (where applicable)	Name of the rate used for leg 2 which are reset at predetermined intervals by reference to a market reference rate, where "Identifier of the floating rate of leg 2" is not available. Field value: Alphanumeric string	✓	✓	✗	✓	✓	This data field is only applicable if leg 1 is a floating rate, and the floating rate does not have an ISIN. "Name of the floating rate of leg2" should be reported in the format of currency, period (e.g. "ON" = Overnight, "W" = Week, "M" = Month), name. For example: USD 3M LIBOR, USD 12M LIBOR, SGD 6M SOR.

				<i>CR</i>	<i>IR</i>	<i>FX</i>	<i>EQ</i>	<i>CO</i>	
36	Settlement	Settlement currency of the contract or leg 1 (where applicable)	For multicurrency contracts that do not net, the settlement currency of leg 1. For all other contracts, the currency for the cash settlement of the contract, where applicable. Field value: Currencies included in ISO 4217	✓	✓	✓	✓	✓	This data field is not applicable for physically settled contracts (e.g. physically settled swaptions).
37	Settlement	Settlement currency of leg 2 (where applicable)	For multicurrency contracts that do not net, the cash settlement currency of leg 2, where applicable. Field value: Currencies included in ISO 4217	✓	✓	✓	✓	✓	This data field is not applicable for physically settled products (e.g. physically settled swaptions).
38	Settlement	Final contractual settlement date	Unadjusted date as per the contract, by which all transfer of cash or assets should take place and the counterparties should no longer have any outstanding obligations to each other under that contract. Field value: ISO 8601 date format, UTC time	✓	✓	✓	✓	✓	For contracts that may not have a final contractual settlement date (e.g. American options), this data field reflects the date by which the transfer of cash or asset would take place if termination were to occur on the expiration date.
39	Clearing	Cleared	Indicator of whether the contract has been cleared, or is intended to be cleared, by a central counterparty.	✓	✓	✓	✓	✓	Field values: "Y" = Yes, centrally cleared, for beta and gamma contracts "N" = No, not centrally cleared

<i>First column</i>	<i>Second column</i>	<i>Third column</i>	<i>Fourth column</i>	<i>Fifth column</i>					<i>Sixth column</i>
<i>Index</i>	<i>Type of information</i>	<i>Data field</i>	<i>Description of data field</i>	<i>Class of specified derivatives contracts</i>					<i>Explanatory notes</i>
				<i>CR</i>	<i>IR</i>	<i>FX</i>	<i>EQ</i>	<i>CO</i>	
			Field values: "Y" = Yes, centrally cleared "N" = No, not centrally cleared "I" = Intent to clear						"I" = Intent to clear, for alpha contracts that are planned to be submitted to clearing
40	Clearing	Central counterparty (where applicable)	Identifier of the central counterparty that cleared the contract, where applicable. Field value: Alphanumeric string	✓	✓	✓	✓	✓	To use LEI or pre-LEI if LEI is not available. This data field is not applicable if the value of the data field "Cleared" is "N" (which means "No, not centrally cleared") or "I" (which means "Intent to clear").
41	Clearing	Clearing member (where applicable)	Identifier of the clearing member through which a contract was cleared at a central counterparty, where applicable. Field value: Alphanumeric string						In the case of the principal clearing model, the clearing member is identified as clearing member and also as a counterparty in both contracts resulting from clearing: (i) in the contracts between the central counterparty and the clearing member; and (ii) in the contracts between the clearing member and the counterparty to the original alpha contract. In the case of the agency clearing model, the clearing member is identified as clearing member but not as the counterparty to contracts resulting from clearing. Under this model, the counterparties are the central counterparty and the client. To use LEI or pre-LEI if LEI is not available. This data field is not applicable if the value of

				<i>CR</i>	<i>IR</i>	<i>FX</i>	<i>EQ</i>	<i>CO</i>	
51	Custom basket	Identifier of the basket's constituents (where applicable)	Underliers that represent the constituents of a custom basket, where applicable. Field value: Alphanumeric string	✓	✓	✓	✓	✓	Underliers that represent the constituents of a custom basket, in line with the underlier ID within the UPI reference data fields, as maintained by the UPI service provider. This data field is not applicable if no custom basket is involved. Reporting of this data field will only commence when reporting of the data field "Basket constituent unit of measure" commences.
52	Custom basket	Source of the identifier of the basket constituents (where applicable)	Source of the underliers' identifiers that represent the constituents of a custom basket, where applicable. Field value: Alphanumeric string	✓	✓	✓	✓	✓	The origin, or publisher, of the associated identifier of the basket's constituents, in line with the underlier ID source within the UPI reference data fields, as maintained by the UPI service provider. This data field is not applicable if no custom basket is involved. Reporting of this data field will only commence when reporting of the data field "Basket constituent unit of measure" commences.
53	Valuation	Valuation amount	Current monetary value of the outstanding contract. Field value: Any value	✓	✓	✓	✓	✓	Current monetary value of the outstanding contract without applying any valuation adjustments. Valuation amount is expressed as the exit cost of the contract or components of the contract,

<i>First column</i>	<i>Second column</i>	<i>Third column</i>	<i>Fourth column</i>	<i>Fifth column</i>					<i>Sixth column</i>	
<i>Index</i>	<i>Type of information</i>	<i>Data field</i>	<i>Description of data field</i>	<i>Class of specified derivatives contracts</i>					<i>Explanatory notes</i>

57	Collateral & margin	Collateral portfolio indicator	Indicator of whether the collateralisation was performed on a portfolio basis. Field value: True, if collateralised on a portfolio basis False, if not on a portfolio basis	✓	✓	✓	✓	✓	If the contract is part of a set of contracts that are margined together (either on a net or a gross basis), then collateralisation is performed on a portfolio basis.
58	Collateral & margin	Collateral portfolio code (where applicable)	Unique code assigned by “Counterparty 1” to the portfolio when collateral is reported on a portfolio basis, where applicable. Field value: Alphanumeric string	✓	✓	✓	✓	✓	This data field is not applicable under the following circumstances: (a) if the collateralisation was performed on a contract level basis; (b) if there is no collateral agreement; (c) if no collateral is posted or received.
59	Collateral & margin	Initial margin posted by Counterparty 1 (pre-haircut) (where applicable)	Monetary value of initial margin that has been posted by “Counterparty 1”, where applicable. Field value: Any value greater than or equal to zero	✓	✓	✓	✓	✓	This data field is applicable to both uncleared and centrally cleared contracts. This data field is not applicable if no initial margin has been posted by “Counterparty 1”. If the collateralisation is performed at portfolio level, the initial margin posted relates to the whole portfolio. If the collateralisation is performed for single contracts, the initial margin posted relates to such single contracts. This data field refers to the total current value of the initial margin, rather than to its daily change. It includes any margin that is in transit and pending settlement, unless inclusion of such

									<p>In the case of a clearing event, this data element should reflect the recorded date and time when the central counterparty (CCP) accepted to clear a transaction.</p> <p>In the case of collateral update, the date and time for which the information contained in the report is provided.</p>

Annex A

Classification of valuation inputs¹⁰

Bucket	Inputs used	Valuation method
1	<p>Quoted prices in active markets for identical assets or liabilities that the entity can access at the measurement date. A quoted market price in an active market provides the most reliable evidence of fair value and is used without adjustment to measure fair value whenever available, with limited exceptions.</p> <p>An active market is a market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.</p>	Mark-to-market
2	Quoted prices for similar assets or liabilities in active markets (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly)	Mark-to-market
3	Quoted prices for identical or similar assets or liabilities in markets that are not active (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly).	Mark-to-model – historic prices from inactive markets should not be directly used
4	Inputs other than quoted prices that are observable for the asset or liability, for example interest rates and yield curves observable at commonly quoted intervals, implied volatilities, credit spreads (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly)	Mark-to-market
5	Inputs that are derived principally from or corroborated by observable market data by correlation or other means (“market-corroborated inputs”) (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly).	Mark-to-model – the inputs can be derived “principally” from observable market data, meaning that unobservable inputs can be used

¹⁰ [CPMI-IOSCO Technical Guidance – Harmonisation of critical OTC derivatives data elements \(other than UTI and UPI\)](#)

6	Unobservable inputs for the asset or liability. Unobservable inputs are used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. An entity develops unobservable inputs using the best information available in the circumstances, which might include the entity's own data, taking into account all information about market participant assumptions that is reasonably available.	Mark-to-model – unobservable inputs are used
---	---	--

Annex B

Collateralisation category – Description of field values¹¹

Value	Name	Definition
UNCL	Uncollateralised	There is no collateral agreement between the counterparties or the collateral agreement(s) between the counterparties stipulates that no collateral (neither initial margin nor variation margin) has to be posted with respect to the derivative contract.
PRC1	Partially collateralised: Counterparty 1 only	The collateral agreement(s) between the counterparties stipulates that Counterparty 1 regularly posts only variation margin and that Counterparty 2 does not post any margin with respect to the derivative contract.
PRC2	Partially collateralised: Counterparty 2 only	The collateral agreement(s) between the counterparties stipulates that Counterparty 2 regularly posts only variation margin and that Counterparty 1 does not post any margin with respect to the derivative contract.
PRCL	Partially collateralised	The collateral agreement(s) between the counterparties stipulates that both counterparties regularly post only variation margin with respect to the derivative contract.
OWC1	One-way collateralised: Counterparty 1 only	The collateral agreement(s) between the counterparties stipulates that Counterparty 1 posts the initial margin and regularly posts variation margin and that Counterparty 2 does not post any margin with respect to the derivative contract.
OWC2	One-way collateralised: Counterparty 2 only	The collateral agreement(s) between the counterparties stipulates that Counterparty 2 posts the initial margin and regularly posts variation margin and that Counterparty 1 does not post any margin with respect to the derivative contract.
OWP1	One-way/partially collateralised: Counterparty 1	The collateral agreement(s) between the counterparties stipulates that Counterparty 1 posts the initial margin and regularly posts variation margin and that Counterparty 2 regularly posts only variation margin.

¹¹ [CPMI-IOSCO Technical Guidance – Harmonisation of critical OTC derivatives data elements \(other than UTI and UPI\)](#)

OWP2	One-way/partially collateralised: Counterparty 2	The collateral agreement(s) between the counterparties stipulates that Counterparty 2 posts the initial margin and regularly posts variation margin and that Counterparty 1 regularly posts only variation margin.
FLCL	Fully collateralised	The collateral agreement(s) between the counterparties stipulates that both counterparties post initial margin and regularly post variation margin with respect to the derivative transaction.

Annex C

Mapping of day count convention field values to ISO 20022 and FpML¹²

Field value	ISO 20022 Name	ISO 20022 Definition	FpML Code	FpML Definition
A001	IC30360ISDAor30360AmericanBasicRule	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). This is the most commonly used 30/360 method for US straight and convertible bonds.	30/360	The number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360, calculated on a formula basis as follows: Day Count Fraction = $[360*(Y2-Y1) + 30*(M2-M1) + (D2-D1)]/360$ "D1" is the first calendar day, expressed as a number, of the Calculation Period or Compounding Period, unless such number would be 31, in which case D1, will be 30; and "D2" is the calendar day, expressed as a number, immediately following the last day included in the Calculation Period or Compounding Period, unless such number would be 31 and D1 is greater than 29, in which case D2 will be 30.54
A002	IC30365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th	-	-

¹² [CPMI-IOSCO Technical Guidance – Harmonisation of critical OTC derivatives data elements \(other than UTI and UPI\)](#)

Field value	ISO 20022 Name	ISO 20022 Definition	FpML Code	FpML Definition
		calendar day of the same month, except for February. This means that a 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th).		
A003	IC30Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.	-	-
A004	Actual360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.	ACT/360	The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360.
A005	Actual365Fixed	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.	ACT/365.FIXED	The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365.
A006	ActualActualICMA	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, ie, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi-interest periods that have the length of a	ACT/ACT.ICMA	A fraction equal to "number of days accrued/number of days in year", as such terms are used in Rule 251 of the statutes, by-laws, rules and recommendations of the International Capital Markets Association (the "ICMA Rule Book"), calculated in accordance with Rule 251 of the ICMA Rule Book as applied to non-US dollar-denominated straight and convertible bonds

Field value	ISO 20022 Name	ISO 20022 Definition	FpML Code	FpML Definition
		regular coupon period and the computation is operated separately on each quasi-interest period and the intermediate results are summed up.		issued after 31 December 1998, as though the interest coupon on a bond were being calculated for a coupon period corresponding to the Calculation Period or Compounding Period in respect of which payment is being made.
A007	IC30E360orEuroBondBasismodel1	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be the 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.	30E/360.ISDA	The number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360, calculated on a formula basis as follows: Day Count Fraction = $[360*(Y2-Y1) + 30*(M2-M1) + (D2-D1)]/360$. "D1" is the first calendar day, expressed as a number, of the Calculation Period or Compounding Period, unless such number would be 31, in which case D1, will be 30; "D2" is the calendar day, expressed as a number, immediately following the last day included in the Calculation Period or Compounding Period, unless such number would be 31, in which case D2 will be 30.
A008	ActualActualISDA	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall (falling on a normal year, year) divided by 365, added to the actual number of days of the interest period that fall (falling on a leap year, year) divided by 366.	ACT/ACT.ISDA	The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365 (or, if any portion of that Calculation Period or Compounding Period falls in a leap year, the sum of (i) the actual number of days in that portion of the Calculation Period or Compounding Period falling in a leap year divided by 366 and (ii) the actual number of days in that portion of the Calculation Period or Compounding Period falling in a non-leap year divided by 365).

Field value	ISO 20022 Name	ISO 20022 Definition	FpML Code	FpML Definition
A009	Actual365LorActuActubasisRule	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).	ACT/365L	The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365 (or, if the later Period End Date of the Calculation Period or Compounding Period falls in a leap year, divided by 366).
A010	ActualActualAFB	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year subperiods counting backwards from the end of the coupon period (a year backwards from 28 Feb being 29 Feb, if it exists). The first of the subperiods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each subperiod and the intermediate results are summed up.	ACT/ACT.AFB	The denominator is either 365 (if the calculation period does not contain 29 February) or 366 (if the calculation period includes 29 February) – where a period of longer than one year is involved, two or more calculations are made: interest is calculated for each full year, counting backwards from the end of the calculation period, and the remaining initial stub period is treated in accordance with the usual rule. When counting backwards for this purpose, if the last day of the relevant period is 28 February, the full year should be counted back to the previous 28 February unless 29 February exists, in which case, 29 February should be used.
A011	IC30360ICMAor30360basicrule	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999.	30E/360	Note that the algorithm defined for this day count fraction has changed between the 2000 ISDA Definitions and 2006 ISDA Definitions. See Introduction to the 2006 ISDA Definitions for further information relating to this change.

Field value	ISO 20022 Name	ISO 20022 Definition	FpML Code	FpML Definition
A012	IC30E2360orEurobondbasismodel2	<p>Method whereby interest is calculated based on a 30-day month and a 360-day year.</p> <p>Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that the 31st is assumed to be the 30th and 28 Feb of a non-leap year is assumed to be equivalent to 29 Feb when the first day of the interest period is the 29th, or to 30 Feb when the first day of the interest period is the 30th or the 31st. The 29th day of February in a leap year is assumed to be equivalent to 30 Feb when the first day of the interest period is the 30th or the 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on 30 Feb when the end of the period is the 30th or the 31st, or two days of interest in February when the end of the period is the 29th, or three days of interest in February when it is 28 Feb of a non-leap year and the end of the period is before the 29th.</p>	-	-
A013	IC30E3360orEurobondbasismodel3	<p>Method whereby interest is calculated based on a 30-day month and a 360-day year.</p> <p>Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be</p>	-	-

Field value	ISO 20022 Name	ISO 20022 Definition	FpML Code	FpML Definition
		equivalent to 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be the 30th, even if it is the last day of the maturity coupon period.		
A014	Actual365NL	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.	-	-
A015	ActualActualUltimo	Method whereby interest is calculated based on the actual number of days in the coupon period divided by the actual number of days in the year. This method is a variation of the ActualActualICMA method with the exception that it assumes that the coupon always falls on the last day of the month. Method equal to ACT/ACT.ISMA in the FpML model and Act/Act (ICMA Ultimo) in the FIX/FIXML model.	ACT/ACT.ISMA	The Fixed/Floating Amount will be calculated in accordance with Rule 251 of the statutes, by-laws, rules and recommendations of the International Securities Market Association, as published in April 1999, as applied to straight and convertible bonds issued after 31 December 1998, as though the Fixed/Floating Amount were the interest coupon on such a bond. This day count fraction code is applicable for transactions booked under the 2000 ISDA Definitions. Transactions under the 2006 ISDA Definitions should use the ACT/ACT.ICMA code instead.
A016	IC30EPlus360	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. This method is a variation of the 30E360 method with the exception that if the coupon falls on the last day of the month, change it to 1 and increase the month by 1 (ie	-	-

Field value	ISO 20022 Name	ISO 20022 Definition	FpML Code	FpML Definition
		next month). Method equal to ThirtyEPlusThreeSixty in the FIX/FIXML model.		
A017	Actual364	Method whereby interest is calculated based on the actual number of accrued days in the interest period divided by 364. Method equal to Act364 in the FIX/FIXML model.	-	-
A018	Business252	Method whereby interest is calculated based on the actual number of business days in the interest period divided by 252. Usage: Brazilian Currency Swaps. Method equal to BUS/252 in the FpML model and BusTwoFiftyTwo in the FIX/FIXML model.	BUS/252	The number of Business Days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 252.
A019	Actual360NL	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 360-day year.	-	-
A020	1/1	If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).	1/1	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (a).
NARR	Narrative	Other methods not listed above.	-	-
