Notes : Prior to June 1999, data on bills financing include bills refinanced by the Monetary Authority of Singapore.
From March 2004, the industry categories have been refined according to the Singapore Standard Industrial Classification adopted by the Singapore Department of Statistics.
The industrial classification is by end-use of loans. If this classification is not possible, the borrower's main business activity will be used.

Column 1 Data prior to March 2004 include loans to Professional and Private Individuals (PPI). However, as there is no breakdown of the data into loans to PPI by business purposes and consumer loans prior to March 2004, the sum of columns 2 and 12 may not add up to the total in column 1.

Column 2 Prior to March 2004, data excludes loans to professional and private individuals for business purposes.

Column 5 Includes loans to building and building co-operative societies, building developers and real estate agents.

Column 11 Data prior to March 2004 includes that of business services.

Note: From March 2004, data for limits granted and percentage utilised include non-bank loans and advances of banks' Asian Currency Units.

Columns 1 & 2 Data prior to March 2004 include loans to Professional and Private Individuals (PPI). However, as there is no breakdown of the data into loans to PPI by business purposes and consumer loans prior to March 2004, the sum of columns 3 and 21 may not add up to the total.

Columns 3 & 4 Prior to March 2004, data exclude loans to Professional and Private Individuals for business purposes.

Columns 9 & 10 Includes loans to building and building co-operative societies, building developers and real estate agents.

Columns 5 to 7 Data have been revised from March 2004 to September 2005.

Columns 1, 2 & 4 Refer to end of period.

Column 6 Charge-off rate for the year is defined as the bad debts written off during the year divided by the average rollover balance for the same year. As monthly charge-off rates tend to be too volatile, we have chosen to publish quarterly charge-off rates instead. However, there can still be seasonal variations. The quarterly charge-off rate is calculated by annualising the ratio obtained from dividing the bad debts written off for the quarter by the average rollover balance for the same quarter.

Notes : US\$ rates are the average of buying and selling interbank rates at noon. Rates for foreign currencies other than US\$ are cross rates derived from the rates of such foreign currencies against the US\$ and the US\$/S\$ rates.

Columns 10-12 Source: The Association of Banks in Singapore (ABS) - Reuters is the official and exclusive calculating agent of the ABS fixing rates.

'-' = discount. These forward swap points are the average of buying and selling of the fixing rates.

To derive the forward rate for the US\$, the forward premium/discount should be added/subtracted from the US\$/S\$ spot exchange rate.

1/ In May 2005, Singapore Exchange Securities Trading Limited (SGX-ST) changed its market capitalisation on computation methodology, which is stated below. For more information, please refer to SGX's website www.sgx.com.sg.

SGX-ST Market Capitalisation = Market Capitalisation of All Domestic Companies + Market Capitalisation of Primary-Listed Foreign Companies + Market Capitalisation of Secondary-Listed Foreign Companies which majority of trading activity takes place in SGX-ST.

Column 1 The Straits Times Index was introduced on 29 August 1998 to replace the Straits Times Industrial Index. Daily data is available on the SGX website at www.sgx.com.sg.

Column 4 Data is for the period stated and includes trades done on both cash and ready basis for SGX-ST Main Board, SGX Sesdaq and Clob International.

Column 5 Includes debentures, loan stocks and warrants of companies whose ordinary shares are listed on SGX-ST.

Column 8 Refers to DBL and TSR of foreign-incorporated companies whose ordinary shares are not listed on SGX-ST.
