Notes : From March 2004, the industry categories have been refined according to the Singapore Standard Industrial Classification adopted by the Singapore Department of Statistics. The industrial classification is by end-use of loans. If this classification is not possible, the borrower's main business activity will be used.

Column 1 Data prior to March 2004 include loans to Professional and Private Individuals (PPI). However, as there is no breakdown of the data into loans to PPI by business purposes and consumer loans prior to March 2004, the sum of columns 2 and 12 may not add up to the total in column 1.

Column 2 Prior to March 2004, data excludes loans to professional and private individuals for business purposes.

Column 5 Includes loans to building and building co-operative societies, building developers and real estate agents.

Columns 1, 2 & 4 Refer to end of period.

Column 6 Charge-off rate for the year is defined as the bad debts written off during the year divided by the average rollover balance for the same year. As monthly charge-off rates tend to be too volatile, we have chosen to publish quarterly charge-off rates instead. However, there can still be seasonal variations. The quarterly charge-off rate is calculated by annualising the ratio obtained from dividing the bad debts written off for the quarter by the average rollover balance for the same quarter.

Notes : US\$ rates are the average of buying and selling interbank rates at noon. Rates for foreign currencies other than US\$ are cross rates derived from the rates of such foreign currencies against the US\$ and the US\$/S\$ rates.

Columns 11-13 Source: The Association of Banks in Singapore (ABS) - Reuters is the official and exclusive calculating agent of the ABS fixing rates.

'-' = discount. These forward swap points are the average of buying and selling of the fixing rates.

To derive the forward rate for the US\$, the forward premium/discount should be added/subtracted from the US\$/S\$ spot exchange rate.
