

Features of the \$10 Polymer Notes

The two see-through clear windows of the note are the most obvious features. They are very effective against counterfeiting, as they cannot be easily reproduced using scanners, printers and colour photocopiers.

The six key polymer security features to look out for are:

1. **Complex Clear Window**
A complex clear window with the design of the Singapore Arms on the front top-left corner
2. **Hidden Text within Complex Clear Window**
Hidden text “MAS” would become visible within the complex clear window when viewed with a point-light source
3. **Shadow Image**
A shadow image of President Yusof bin Ishak is clearly visible when viewed against light
4. **Singapore Lion Symbol with Hidden Text**
A stylized Singapore Lion symbol (gold patch) with the words “TEN DOLLARS”. The image of the Singapore Arms will appear at varying angles
5. **Security Thread**
A security thread in the shape of Singapore island
6. **Embossed Clear Window**
A clear window on the front bottom-right corner embossed with the number “10” at the centre and small repetitive patterns at the top and bottom
